

Vertical Line Charts

- i. A headteacher at a secondary school is collating the results of a recent English test. The maximum possible score in the test was 75 points.

- What score was the mode score in the test?
 - What was the range of marks in the exam?
- ii. Tanya conducted a survey in a shopping centre. She asked the age of each person she surveyed and created a graph showing the results.

- How many people did Tanya survey in total?
- Tanya’s friend Jasmine looked at her results and said ‘This must mean that the average age of a person you surveyed was 35 years old’. Explain why there is not evidence to determine the average age.
